What does a solar inverter do?

Our commitment to providing these advanced solar solutions reflects the high-quality renewable energy options residents trust for their homes. Solar inverters have one core function: to convert the Direct Current (DC) solar panels generate into an Alternating Current (AC), which is the type of electricity used in your home.

What payment methods does waveinverter accept?

Payment Methods: We accept payment in store by EFTPOS, Creditcard and Cash. Welcome to Waveinverter at 15 View Rd, Henderson, Auckland We are a one stop shop for everything related to off-grid power, we look after customers with solar powered homes, marine, motorhome and trade vehicles.

How do microinverters work?

Microinverters are installed beneath each panel and convert the DC current to AC before it leaves the roof. Microinverters cost a little more than string inverters, but they last longer and offer benefits in terms of safety, efficiency, and flexibility.

How good is a string inverter system?

A string inverter system is only as good as its lowest-performing panel. If shade or a pile of leaves reduces one panel's output, every other panel will work at the same reduced capacity.

Why should you use a microinverter on your roof?

Microinverters convert the DC current to AC on the roof, which means there is no high-voltage DC working its way across your roof to connect to a central inverter. This not only reduces the potential for a fault to spark a fire, it's also safer for anyone who needs to be on the roof for any reason.
