How to build a portable generator enclosure?

To build a portable generator enclosure, you're most of the way there if you can install a door frame. Here's how to proceed: Portable generator enclosures are fairly easy to build. It's recommended to have a professional electrician hard wire the generator to your house, especially if you plan on powering your entire house with it.

What size generator container do I Need?

Our generator containers for Type 2, 3, and 4 gas engines have a standard 40-foot length. Width and height depend on engine type, the application (power generation only or CHP) and ambient conditions. Customized sizes to accommodate special project requirements are available on request.

Why should I build a container for my portable generator?

Here are some of the best reasons for building a container for your portable generator. Weather: An enclosure protects your generator from weather conditions such as rain, snow, freezing temperatures, and high winds. Not only can harsh weather ruin a generator, but it can void your warranty, too.

How to connect a portable generator to a house?

There are two safe methods to connect a portable generator to a house: using an extension or generator cord or a transfer switch. You should not connect the generator directly into a wall socket, which is a dangerous method. If you have a smaller portable generator and are facing a blackout, you can consider using one of these methods.

Which genset containers are available?

All genset containers are also available with an option for -40°C and most variants can be upgraded for +45°C. A broad range of options, both mechanical and electrical, are available to ensure that our containers meet the project requirements. For example, we offer several heat recovery configurations and exhaust after treatment systems.

What is a type 6 generator container?

Our Type 6 generator containers consist of two or three pre-assembled modules, depending on the engine type and the application. The overall package (gas engine, container, and auxiliary components) is available for 65, 70, 75 and 80 dB (A) in 10m (surface sound pressure level according to DIN 45635).
