Who are switchgear Ltd?

Welcome to Switchgear Ltd. We specialise in the supply of low voltage switchgear systems supplied to trade and industry.

How does a generator switch work?

You can also use this system as a manual transfer switch. This generator switchgear prompts the generator to start up when utility power fails, and makes the switch within a timeframe of 30 seconds. The MTS panel on this generator changeover switchgear also monitors the stability of utility power before reverting the load.

What types of automatic transfer switches are available?

We supply a large range of 3 and 4-pole automatic transfer switches (ATS) from 25 to 3200 amp. We also stock a comprehensive selection of 3 and 4 pole dual power automatic transfer switches from 25 to 2000 amp, for applications where a secondary backup source of emergency power is required in the UK.

What does the MTS Panel on a generator switchgear do?

The MTS panel on this generator changeover switchgear also monitors the stability of utility power before reverting the load. However, this happens only after a 20 second delay, post mains restoration; which also signals the generator switchgear to kill the generator.

What is a motorised switch?

Motorised switch's with centre off position, to enable automatic selection of 2 different supplies; most commonly a mains supply and a back-up generator supply.

What is an ABB Switch?

Utilising the range of switches from the ABB range, these are equipped with motor operators, and are programmable, electronic control delay timers for both supplies, and provide signalling to stand-by supply or generator, as required. You can also use this system as a manual transfer switch.

You can rely on us for manual changeover switch, automatic changeover switch, manual transfer switch generator, ATS, generator switchgear, new generators ...
