What happens if a hospital power supply fails?

Aside from being a jarring experience for patients, a disruption to the power supply at a hospital can lead to equipment malfunctions, system corruption, hardware damage, and data loss. Power protection systems in medical institutions have higher standards than those for commercial or industrial use.

Why do hospitals need uninterruptible power supplies?

Therefore, hospital organizations also have data centers that must be protected with uninterruptible power supplies under any circumstance. First of all, these electrical devices are a prevention system. The best remedy for any unforeseen, especially in the field of health, is to be prepared.

What are uninterruptible power systems (UPS)?

Always, also, without prejudice to the technical teams or the patients. Uninterruptible Power Systems (UPS) are a device thanks to which the power supply can be maintained even when abnormal situations occur.

Do health centers have uninterrupted power systems?

In short, from ETKHO we recommend without any doubt that every health center or hospital has uninterrupted power systems that guarantee its work in any of its areas, especially in critical hospital areas, and in any type of circumstance, even in the most critical. Always, also, without prejudice to the technical teams or the patients.

Why do hospitals need a large UPS system?

Additionally, high-end advanced diagnostic systems require large UPS systems to provide adequate backup. Given all these interconnected systems, an interruption to power delivery at a hospital for even just a few seconds can disrupt thousands of interdependent operations.
