What is a portable power station?

Portable power stations can power and charge electronic devices off the grid. They don't burn fossil fuels, so they're cleaner, quieter, and require minimal maintenance compared with gas- and diesel-powered generators. They can be recharged using solar panels and home electrical outlets.

How to choose a portable power station?

When selecting a portable power station, consider your needs. For small devices like headphones and smartphones, a compact portable power station of around 100Wh is sufficient, similar to a big power bank. However, for larger devices such as refrigerators or TVs, opt for a more heavy-duty option with 500Wh or more.

What can a portable power station charge?

A portable power station can charge and power a variety of devices, from small electronics like smartphones, tablets, laptops, and cameras to larger appliances such as mini-fridges, TVs, and even power tools.

What accessories do you need for a portable power station?

One of the most common accessories is going to be a cord to connect to similar power stations in series, often times doubling your power output. Some portable power stations have a light bar built into the housing, which is useful for seeing at night. Anker's Solix C300 also includes a pop-up camping light.

Do power banks have pass-through charging?

Power banks with pass-through charging are pretty handy since they allow you to charge your connected device and the power bank itself at the same time. Although pass-through charging is not very efficient and should be avoided if not necessary, it does provide a worry-free charging experience in some contexts.

Is pass-through charging a good idea?

Although pass-through charging is not very efficient and should be avoided if not necessary, it does provide a worry-free charging experience in some contexts. A lot of people don't know that pass-through charging is not a standard feature on all power banks.
