Why is power-to-gas important in Iceland?

In a system that relies entirely on renewable energy, power-to-gas makes an important contribution to seasonal storage. In Iceland, the conditions for power-to-gas are particularly favourable. The first power-to-gas plant in Iceland is to be built on the site of the Hellisheidi geothermal power plant.

How is Reykjanesvirkjun power plant controlled?

The design of the power plant is such that it is generally controlled remotely from a control center in Svartsengi. Unlike the power plant in Svartsengi, Reykjanesvirkjun is only a power plant consisting of two 50 MW dual-flow turbines with sea-cooled condensers, but such a system was a novelty in Iceland at the time when the power plant was built.

What are the conditions for power-to-gas in Iceland?

In Iceland, the conditions for power-to-gas are particularly favourable. The first power-to-gas plant in Iceland is to be built on the site of the Hellisheidi geothermal power plant. Further plants will follow at various locations in Iceland and, at a later time, in Norway.

When did electricity production start at Reykjanesvirkjun?

Electricity production at Reykjanesvirkjun started in the month of May in 2006. Machine 1 was commissioned in the middle of May and machine 2 at the end of the same month. The design of the power plant is such that it is generally controlled remotely from a control center in Svartsengi.
