Summary: Anting town in Shanghai's Jiading district has forged a partnership with Tanikawa Technology Co Ltd, a leading site selection consulting service provider in China, to establish an international hydrogen energy industrial park.

Does China have a new energy industry?

In the context of the global energy transition from fossil fuels to renewable energy sources, China's legions of wind turbines and seas of photovoltaic panels are quite eye-catching. China's new energy industry has experienced rapid growth in recent years, maintaining a double-digit annual growth rate.

Is China's new-energy sector a global game-changer?

LI XIAOMING/FOR CHINA DAILY BEIJING -- China's fast-growing new-energy sector is not only a domestic success story, but also serves as a global game-changer, offering collaboration dividends across the entire industrial chain and providing a fresh boost to the global economy.

Why is Thailand launching a new-energy sector in China?

Thailand is tapping into China's knowledge and technical expertise to bolster its own electric vehicle sector, drive technological advancements, and generate employment opportunities, Surasit said. China's foray into the new-energy sector is not an isolated endeavor. It is an open-door policy aimed at fostering growth.

What is new energy?

New energy or renewable energy is the energy obtained from renewable resources that refill over time. Energy obtained from these renewable resources is useful in many crucial areas such as water and air heating/cooling, electricity generation, off-grid (rural) energy services, and transportation.

What's happening in China's new-energy sector?

China's new-energy sector has continued on a rapid rise despite intensifying US efforts to contain it, as several world-leading projects and other major developments have been launched in recent days, including the start of a \$3 billion plant for crucial material for solar power on Thursday.

How has China's energy industry changed over the years?

China's new energy industry has experienced rapid growth in recent years, maintaining a double-digit annual growth rate. Since 2013, the country's wind power and solar power installed capacity have grown six times and more than 180 times respectively.
