What is a containerised generator?

Like the canopy sets, containerised generators are built to house the generators and ensure they are soundproof, which is completed by the containers being heavily fitted with soundproofing technology, and like the open sets can reach a high-poweroutput of 3000KVA for diesel and up to 2000KW for gas power.

Why should you use a containerised generator set?

This protective enclosure safeguards the equipment from adverse weather conditions, dust, and other external factors. Additionally, the container offers increased security against theft or vandalism, making containerised generator sets suitable for applications where equipment safety is a concern.

What is a generator container?

These containers are designed to protect the generator from external elements, ensuring secure operation in diverse environments. The generator sets within these containers can vary in size and capacity, making them suitable for a wide range of applications.

Why should I build a container for my portable generator?

Here are some of the best reasons for building a container for your portable generator. Weather: An enclosure protects your generator from weather conditions such as rain, snow, freezing temperatures, and high winds. Not only can harsh weather ruin a generator, but it can void your warranty, too.

Why do generators need a container structure?

The robust container structure provides enhanced security and durability to the generator set. This protective enclosure safeguards the equipment from adverse weather conditions, dust, and other external factors.

How do I choose the best containment tank for my Generator?

To choose the best containment tank for your Diesel Generator, consult your installation contractor. They can help you determine the appropriate type and size for your generator. Consider including a storage area for any fuels, fluids, and lubricants you'll be using, each with their own containment tank.
